

DETAILED ACTION

Claims 1, 3-13, and 15-21 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Prior art of record fails to teach a combination of elements including computing accuracy of the searched content with respect to the at least one keyword, based on a predetermined accuracy computing criterion; searching for the registration date information for the searched content using the content information database; computing time difference information by using the searched registration date information and the time information received from the timer; computing a time function value corresponding to the computed time difference information by using the time function table; computing importance information of the searched content using the computed accuracy and the computed time function value; sorting at least one content in accordance with the computed importance information, thereby processing the sorted content into search result list information; maintaining a temporal adverb keyword database storing at least one predetermined temporal adverb keyword; wherein computing importance information with respect to the searched content using the computed accuracy and the computed time function value comprises: abstracting at least one temporal adverb keyword stored in the temporal adverb keyword database, from the searched content; and in case that the temporal adverb keyword is

Art Unit: 2164

abstracted from the searched content, multiplying predetermined weight corresponding to the abstracted temporal adverb keyword to the computed importance information as recited in independent claims 1 and 12.

Prior art of record fails to teach a combination of elements including computing accuracy of the searched content with respect to the keyword, based on a predetermined accuracy computing criterion; searching for the registration date information for the searched content by referring to the content information database; computing time difference information by using the searched registration date information and the time information received from the timer; abstracting at least one temporal adverb keyword stored in the temporal adverb keyword database, from the searched content; and in case that the temporal adverb keyword is abstracted from the searched content, abstracting the weight corresponding to the abstracted temporal adverb keyword and the computed time difference information, by referring to the temporal adverb keyword database; computing importance information by calculating the computed accuracy and the abstracted weight; and sorting at least one content in accordance with the computed importance information, thereby processing the sorted content into search result list information as recited in independent claims 5 and 21.

Prior art of record fails to teach a combination of elements including an importance information computing unit, the importance information computing

Art Unit: 2164

unit computing time difference information by using the searched registration date information and the time information received from the timer, the importance information computing unit computing a time function value corresponding to the computed time difference information by referring to the time function table, and the importance information computing unit computing importance information of the searched content by calculating the computed accuracy and the computed time function value; a search result processing unit sorting at least one content in accordance with the computed importance information, thereby processing the sorted content into search result list information; a temporal adverb keyword database storing at least one predetermined temporal adverb keyword and predetermined weight corresponding thereto; a keyword abstracting unit abstracting the temporal adverb keyword stored in the temporal adverb keyword database, from the searched content; and a weight information computing unit, the weight information computing unit abstracting the weight with respect to the temporal adverb keyword by referring to the temporal adverb keyword database if the temporal adverb keyword included in the content is abstracted from the keyword abstracting unit; and wherein the importance information computing unit computes the importance information by calculating the weight abstracted from the weight information computing unit with the accuracy and the time function value as recited in independent claim 13.

These features, together with the other limitations of the independent

Art Unit: 2164

claims are novel and non-obvious over the prior art of record. The dependent claims being definite, enabled by the specification, and further limiting to the independent claim, are also allowable.

Information Disclosure Statement

Applicants' Information Disclosure Statements, filed 08/25/2006 and 06/23/2009, have been received, entered into the record, and considered. See attached form PTO-1449.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LESLIE WONG whose telephone number is (571)272-4120. The examiner can normally be reached on Monday to Friday 9:30am - 6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, CHARLES RONES can be reached on (571)272-4085. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2164

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
